DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: ISOLATION CELL TYPE 1 and ALL OTHER POWER SUPPLIES in Fig. 2; L1, D and Q in Fig. 3; RP22, I21, I22 and I23 in Fig. 5; 850 and 860 in Fig. 8. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-11 and 24-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Merritt, 6,205,078.

Merritt, 6,205,078, discloses in Fig. 1, a computer system 101 fabricated on a single integrated circuit including: embedded dynamic random access memory (DRAM) 20 interfaced with logic section 200 (see lines 53-57, column 3), therefore, it is obviously included a substrate;
as shown in Fig. 2, input buffer 10 is controlled by ENABLE signal to be operational or disabled during power-down operation (see lines 28-33, column 5), therefore, input buffer 10 is obviously read on the isolation cell circuitry.

Allowable Subject Matter

4. Claims 12-17 are allowed.
5. The following is an examiner's statement of reasons for allowance:

The isolation cell comprising a totem pole arrangement and a latch circuit as recited in claims 12-17 has not been found in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Clark, 6,650,589, Arimoto et al., 6,781,915, and Marquot et al., 5,978,262.
